

Ore Branch Floodplain Restoration Phase II – Maintenance and Management Plan

As this project uses nature-based solutions, it is anticipated that maintenance at the site will require the following:

- Invasive species identification and removal – once every two months during growing season
- Selective mowing and string trimming – once every two months during growing season
- Bush hogging of meadow areas – once per year
- Reseeding and replanting of site if/when needed.
- Inspect site annually to assure conformance with design

Maintenance will be the responsibility of the City of Roanoke's Stormwater Division; the Division presently has the capabilities to maintain this site, and continues to grow its green infrastructure maintenance crews.
